EDUCATION

Prathyusha Engineering College , Tiruvallur

Bachelor of Technology in Artificial Intelligence and Data Science

Nov 2022 - Present

CGPA : 8.2/10

Shree Niketan Patasala , Tiruvallur

Senior Secondary - Class XII

Apr 2021- May 2022

Percentage : 79.8

CAREER OBJECTIVE

Software Engineer with a specialization in Machine Learning and Data Engineering, proficient in Python, TensorFlow, and Scikit-Learn. Experienced in designing end-to-end ML pipelines and scalable backend architectures using Flask and FastAPI. Skilled in managing large-scale datasets and deploying deep learning models to production environments. Passionate about building intelligent monitoring systems.

SKILLS

Programming Languages : Python,SQL,Java (Basics)

Machine Learning : Supervised Learning, Unsupervised Learning, Model Evaluation, Feature Engineering

Deep Learning : CNN, TensorFlow, Computer Vision

Libraries/Frameworks : NumPy, Pandas, Scikit-Learn, Matplotlib, Seaborn, OpenCV

Data & Visualization : Power BI, Excel, Data Cleaning, Data Analysis

Soft Skills : Analytical Thinking, Problem Solving, Communication, Fast Learner

PROFESSIONAL EXPERIENCE

FLUTTER DEVELOPER INTERN | BETA SOFTNET | TIRUVALLUR

Jul 2026 - present

- Architected and rendered fluid, responsive mobile UIs using Flutter and Dart across both Android and iOS platforms , Designed custom animations, custom painters, and interactive UI components
- Integrated complex RESTful APIs and websockets with Dio and Http packages to deliver real-time data synchronization
- Optimized render pipeline and widget trees, reducing frame drops and boosting overall application performance by 30%

DATA SCIENCE INTERN | VULTURE LINES TECHNOLOGIES | CHENNAI Jul 2025 - Aug 2025

- Developed backend data processing modules using PHP and MySQL
- Implemented SQL queries and statistical analysis techniques for structured datasets
- Improved data processing efficiency by 30% through automation

PROJECTS

**DEEPFAKE CONTENT MONITORING AND REAL-TIME ALERT SYSTEM
FOR SOCIAL MEDIA (PYTHON, TENSORFLOW, RESNET, OPENCV)**

[Link](#)

- Built a deep learning-based deepfake detection system using the ResNet-18 architecture with transfer learning (ImageNet pretrained weights) to classify manipulated video frames
- Implemented an OpenCV preprocessing and feature extraction pipeline for frame sampling, normalization, and model-ready inputs.

DROWSINESS DETECTION WEB APPLICATION (TENSORFLOW + OPENCV)

[Link](#)

- Built a real-time driver monitoring system using Convolutional Neural Networks (CNN)
- Processed live video frames using OpenCV for eye detection and fatigue analysis

ADDITIONAL INFORMATION

LANGUAGES : English (Fluent), Tamil (Fluent), Hindi (Basics)

CERTIFICATIONS : Gen AI powered data analytics - TATA(2025), PowerBI - MICROSOFT(2026)
